

# TYPHOON™ PLUS THINWALL DRIPLINE

**ULTRA LOW  
FLOW RATES  
STARTING AT  
0.11 GPH**

## REVOLUTIONARY AND INNOVATIVE TURBUNEXT™ TECHNOLOGY INCREASES GROWER REVENUES WHILE REDUCING COSTS

Netafim continues to address the changing needs of our growers and we continue to set new standards in clog resistance and enhanced performance with the new Typhoon Plus thinwall driplines.

A high quality dripline for multi-season use that can be used for surface or subsurface (SDI) applications. Our newest innovation - TurbuNext™ Technology - offers lower flow rates with a large filtration area while maximizing the internal turbulence. All this results in the durability and clog resistance growers need in challenging water conditions.

Typhoon Plus' durability and superior clog resistance allow a grower to benefit from higher and more uniform yields year after year. Optimizing results season after season means peace of mind!

### LONGEVITY = PROFITS

The ability to use Typhoon Plus for multi-season applications means a smaller initial investment and a faster return with higher, more uniform yields.

### LOWER FLOW RATES = LOWER COSTS

New ultra-low flow rates (the lowest in the industry) mean a grower can use longer lateral lengths and fewer submain pipes which results in up to 15% savings on irrigation system costs (materials and labor).

### OUTSTANDING PERFORMANCE

The TurbuNext dripper labyrinth moves the debris out of the dripper preventing clogging so you won't have to worry about system performance.

**SAVE 15%  
ON IRRIGATION  
SYSTEM COSTS**

**Wide Flow Path and Angled Teeth** - maximizes water flow velocity while moving faster through the dripper to eliminate clogging.

**Innovative Labyrinth Passage** - our patented labyrinth water passage maintains a unique geometric tooth-shaped structure that increases turbulence, enabling the creation of wider, deeper and shorter passages.

It's time to see a faster return on your investment and Typhoon Plus thinwall driplines will help you do it!
